Carlos Ruiz

Just Create the Rule

Within the script you can use the following predefined variables:

- A_Ctx
- A_AD_Client_ID
- A_AD_Org_ID
- A_AD_Role_ID
- A_AD_User_ID

The screenshot shows the ADempiere Rule Editor window. The title bar reads: "Rule beanshell:DontAllowGardenAdmin Don't Allow GardenAdmin to log in SuperUser@System.* [[linuxqss{linuxqss-orclqss-adempieretrunk}]]". The menu bar includes File, Edit, View, Go, Tools, Window, and Help. The toolbar contains various icons for navigation and editing. The main form has the following fields:

- Client:** System
- Organization:** *
- Search Key:** beanshell:DontAllowGardenAdmin
- Name:** Don't Allow GardenAdmin to log in
- Description:** Don't Allow GardenAdmin to log in
- Comment/Help:** Just a sample to show the new functionality Model Validator Login
- Event Type:** Model Validator Login Event
- Rule Type:** JSR 223 Scripting APIs
- Script:**

```
org.compiere.model.MUser user = new org.compiere.model.MUser(A_Ctx, A_AD_User_ID, null);
if (user.getName().equals("GardenAdmin"))
    retorno = "GardenAdmin is banned from this installation";
else
    retorno = "";
resultado = retorno;
```
- Entity Type:** User maintained
- Active:** ☒

At the bottom, there is a "Navigate or Update record" button and a page indicator "3/3".

Code provided for copy/paste testing

On the Rule Search Key:

```
beanshell:DontAllowGardenAdmin
```

On the Rule Script:

```
org.compiere.model.MUser user = new org.compiere.model.MUser(A_Ctx, A_AD_User_ID, null);
if (user.getName().equals("GardenAdmin"))
    retorno = "GardenAdmin is banned from this installation";
else
    retorno = "";
resultado = retorno;
```
